

Our Reference: E49

Name and Address: David Adams	Where caught: River Teith
	Species: Sea Trout
	Length: 28"
	Weight: 9½ lb
	Date: 21 June 2000 Sex: —

Type of Request / Other Background Details:
Scale reading.

REPORT

This sea trout had gone to sea as a two year old smolt in the spring of 1997 and returned to spawn in each of 1998 and 1999. It was now on its third return to fresh water. Our summary for the life history is 2.1+.2sm+ where the first 2 is for the years in fresh water before smolting, the 1+ is for the first period at sea before making its first return to fresh water, the 2sm+ are for two spawning marks on the scales each followed by recovery (fresh growth) at sea.
